THE MARCH EMPLOYMENT SITUATION Friday, April 7, 1995

CONGRESS OF THE UNITED STATES, JOINT ECONOMIC COMMITTEE, WASHINGTON, D.C.

The Committee met at 9:30 a.m. in Room 562, Dirksen Senate Office Building, the Honorable Connie Mack, Chairman of the Committee, presiding.

Present: Senator Mack and Representative Stark.

OPENING STATEMENT OF SENATOR CONNIE MACK, CHAIRMAN

Senator Mack. I'll call the hearing to order.

This could be a very, very fast hearing this morning with the Senate finishing its work last night, the House yesterday. I understand there's some activities on the steps of the Capitol this morning with the House. So I don't know how many of my colleagues are going to show up.

At any rate, we want to welcome Commissioner Abraham back to the Committee.

I have a prepared statement. I think I will just touch on a couple of points and then turn to you and let you make your report.

We're all pleased to note the 203,000 increase in payroll employment in March. However, the slower March employment growth reported in both the household and payroll surveys suggest that the pace of job growth may be decelerating.

In addition, the unemployment rate also ticked up one-tenth of a percentage point. However, as we all know, one month of data does not make a trend. Additional information in coming months will be needed before we can draw conclusions about a possible slowdown in employment growth.

I think it's fair to say, however, that there are mixed signals in the economy today. Clearly, we're all pleased by the upward revision in the GDP growth. But also, we've got to be concerned with the significant drop

in the dollar, yesterday hitting new lows. And as we review various reports on the economy, there are indicators of the economy slowing down.

But, as I say, one month of data does not indicate a trend. And so, at this point, I will turn to the Commissioner and ask you to make your report. [The prepared statement of Senator Mack appears in the Submissions for the Record.]

STATEMENT OF

THE HONORABLE KATHARINE G. ABRAHAM, COMMISSIONER, BUREAU OF LABOR STATISTICS

ACCOMPANIED BY THOMAS J. PLEWES, ASSOCIATE COMMISSIONER, EMPLOYMENT AND UNEMPLOYMENT STATISTICS, AND KENNETH V. DALTON, ASSOCIATE COMMISSIONER, PRICES AND LIVING CONDITIONS

Ms. Abraham. Thank you very much, Mr. Chairman. We are, of course, pleased to be here again to talk about the latest employment and unemployment figures.

As you noted, nonfarm payroll employment rose in March and the unemployment rate was virtually unchanged at 5.5 percent. The growth in payroll employment totaled 203,000. This was well below February's increase and also about 100,000 below the average for the prior 12 months.

The lion's share of the March increase occurred in construction and services. Construction employment rose in March by 58,000, as unseasonably mild temperatures prevailed over much of the nation. The number of jobs in services grew by 133,000, a gain much more in line with recent trends than February's surge of 217,000.

Within the diverse services industry, health services had its largest job gain in a year. Amusements and recreation also had a large increase due in part to the mild weather. Business services employment, which had risen sharply the previous month, was little changed.

The personnel-supply component of business services hired fewer workers than normal in March, leading to a seasonally-adjusted employment decline of 35,000, which is somewhat unusual.

Senator Mack. Say that again, please.

Ms. Abraham. The personnel-supply component of the business services industry, on a seasonally-adjusted basis, experienced an employment decrease of 35,000.

As you know, that industry has been growing rapidly for quite some time. So this is a bit unusual.

This decline was offset by gains in other components within business services, such as computer services, where hiring remained strong.

Employment in finance, insurance and real estate rose by 17,000 in March, recouping most of the job losses that occurred between August and

February in that industry. All three components of the industry experienced job gains. Retail employment was about unchanged, following a strong gain the month before.

Manufacturing employment was flat in March. From October through January, for a period of four months, job gains in manufacturing had averaged in excess of 40,000, but the pace had slowed in February. The March weakness was widespread and included declines in apparel and textiles.

Only industrial machinery continued to experience strong employment growth. Both the manufacturing workweek and factory overtime declined by two-tenths of an hour, although they did remain at very high levels by historical standards.

Turning to the data from the household survey, the employment situation of most major worker groups was little changed. The overall unemployment rate has remained little changed since late last year, after having trended downward over the prior two-and-one-half years.

The number of job seekers who had been unemployed for 27 weeks or more rose by 140,000 in March, offsetting a similar decline in February. At 1.3 million, long-term unemployment is about 450,000 below its level of a year ago.

This group now comprises about 19 percent of the total unemployed, which is noteworthy insofar as it's about twice the proportion of long-term unemployed in the total unemployed prior to the onset of the last recession.

Senator Mack. Could you restate that?

Ms. Abraham. Sure. The proportion of the unemployed who have been unemployed for 27 weeks or more was about 19 percent in March, which is about twice what it was if you look back to 1990 prior to the onset of the recession.

That's normally something that's very cyclical. It goes up during a recession and then comes back down. This recovery has been unusual in that the proportion of the unemployed who are long-term unemployed has remained quite high.

Senator Mack. You're saying that this is a further increase in that?

Ms. Abraham. Well, it's been kind of bouncing around. It had gone down. The number had gone down last month, but then it was back up this month.

This is really more noteworthy as a long-term trend rather than with reference to what happened this month.

Senator Mack. Right.

Ms. Abraham. Looking at the reason why, trying to look for reasons as to why this faction is high, there is no one factor that we could identify as

being responsible, though some of it may stem from the higher representation of managers and professionals and also the larger share of the unemployed who are middle-aged or older.

That may be relevant because those groups tend to experience longer periods of job search when they become unemployed, though I don't think that's the whole explanation.

In summary, then, payroll employment rose moderately in March, with the growth concentrated in the services and construction industries. Manufacturing employment was unchanged. The unemployment rate, at 5.5 percent, was about the same as in the prior month.

My colleagues and I would of course be happy to answer any questions that you might want to bring up.

[The prepared statement of Ms. Abraham appears in the Submissions for the Record.]

Senator Mack. Okay. Do you have anything?

OPENING STATEMENT OF REPRESENTATIVE PETE STARK, RANKING MINORITY MEMBER

Representative Stark. I'm pleased to join with the Chairman to welcome you and your colleagues and your good news.

I have your statement, and as I glanced through it, it appears that we have a combination of strong growth and low inflation. This far down the road in an expansion, that's unusual. It's at least good news.

On my side of the aisle, we need all the good news we can find.

(Laughter.)

So I'd like to welcome Commissioner Abraham and look forward to discussing this some more.

Thanks very much. Thank you, Mr. Chairman.

Senator Mack. Sure. I would start with asking you how you interpret the data from the manufacturing sector this month. You indicated that it was basically about even. I guess there was a decline of about 4000.

Ms. Abraham. Which is not large enough to really be statistically significant.

Senator Mack. Right.

Ms. Abraham. Which is why we would characterize that as about unchanged.

If you look -- as I noted in my statement --

Senator Mack. Give me a sense, if you will, what the growth in manufacturing has been, say, for the previous three or four months.

Ms. Abraham. If you look back to October, in October, it had grown by 46,000, 41,000 in November, 43,000 in December, 45,000 in January.

So, in each of those months, it had been running in excess of 40,000 jobs added on per month.

It slowed in February to 18,000 jobs. And then this month, we have minus 4000, which, as I said earlier, is about unchanged.

Senator Mack. Yes. So when you look at it in the context of manufacturing over the last five or six months, it's fair to say, though, that it was running around 40-plus for several months, slowed, and then shows a decline.

Ms. Abraham. Right. What you make of that is, as you emphasized in your opening remarks, one month doesn't necessarily make a trend.

Senator Mack. Exactly.

Ms. Abraham. If you look back over the prior year, there were a number of months where we had growth in manufacturing employment of 1000, 2000, which is essentially the same as what we saw this month. And in the following month, a return to somewhat larger increases.

So we do really have to wait and see what happens in subsequent months.

Senator Mack. Talk a minute about the construction number, though. That was kind of a surprise, wasn't it, the growth in jobs in construction?

Ms. Abraham. Well, there was a big increase in construction, 58,000 in March. That increase, however, was concentrated in those segments of construction that are especially weather-sensitive.

The weather was quite mild in March, so it's possible that part of what was going on in construction was that we were seeing people returning to work sooner than in the average year they might have, that our seasonal factors weren't expecting that and that we therefore saw it showing up as an increase on a seasonally-adjusted basis.

Again, we'll have a better idea in May, when we see the April numbers.

Representative Stark. You didn't just do that because the building trades had their convention here in town last week.

That wasn't part of your reasoning for raising construction jobs.

Ms. Abraham. No.

Representative Stark. Okay. Thank you, Mr. Chairman.

Senator Mack. You're welcome. It's a pleasure to have you with us this morning.

(Laughter.)

Was there anything in the numbers from a seasonal perspective that you think could skew the data one way or the other?

Ms. Abraham. Well, I guess there is this question about what we should make of the construction numbers that we've just talked about.

Senator Mack. I'll tell you, it might be helpful to give us the numbers again in construction, let's say for the last four, five, or six months.

Ms. Abraham. Okay. This has been kind of an unusual year weather-wise. January was extremely mild. February was about average. And March was again unusually mild.

Senator Mack. For a moment, one might think we were hearing a weather report as opposed to --

(Laughter.)

Ms. Abraham. I sometimes feel like that sitting in the meetings that we have before we come over here to discuss these numbers.

(Laughter.)

But if you look back, November construction employment was up 70,000, December was up 6,000, January was up 42,000, February, minus 35,000, March was up 58,000.

I think, at least with respect to the January, February, and March numbers, there clearly is some issue with respect to the seasonal adjustment that we're doing insofar as that's based on average conditions and conditions this year haven't been average.

We probably overstated growth -- we got growth in January because seasonal factors were expecting a decline and we didn't get as big a decline. We returned to normal in February.

Maybe what we're seeing in March is people going back to work earlier than they might ordinarily do.

Senator Mack. Right. In February, there was a big jump in employment in the household survey and a much more modest increase in March.

I can't remember. Is this a new household survey, or a new approach in this last year? And are we experiencing some --

Ms. Abraham. Well, we did change the household survey in January of 1994. So we've been working with the redesigned survey for a little over a year now.

The survey seems to have been pretty well behaved in the sense that there's no clear indication of problems with the way that we do the seasonal adjustment or anything of that sort, though these numbers always jump around a lot from month to month.

So in terms of month-to-month changes in employment, our inclination is to really focus on the numbers from the payroll survey and to really, insofar as we're looking at the employment numbers from the household survey, to try to focus on somewhat longer periods.

Senator Mack. So, again, you don't see anything unusual in the household data.

Ms. Abraham. I don't know if you have anything that you want to add to that, Tom.

Mr. Plewes. (Nods in the negative.)

Ms. Abraham. No. It's consistent with it being a pretty volatile series month-to-month.

Senator Mack. And you're comfortable with the way that the household survey is performing?

Ms. Abraham. Yes, we are. Before the fact, we were concerned that, for example, seasonal behavior of the numbers coming from the redesigned survey might be different than that of the numbers coming from the old survey.

But there's no clear indication that that's been a problem.

Senator Mack. I only have one other area at this point that I want to raise, and then I'll turn to you, Pete. And this is really more of an interest or almost an academic question, I guess.

There's a tendency to talk about employment either as manufacturing or as service. And there's also a tendency to talk about the service employment as hamburger-flipping.

I know that in the data that you provided, you break down the service side of this thing in very, very fine areas.

Ms. Abraham. Right.

Senator Mack. But I'm thinking that there is such a difference within the service sector as far as employment is concerned. You've got people in some of the highest knowledge-based industries. You have the computer industry. You've got the medical community included in that. And then you have, of course, basic minimum wage jobs.

Is there a different approach that we ought to be taking? Is there another broad category that it would be helpful for us to split out so that we could talk about what's happening in the high-tech, high-information, high-knowledge-based industries?

There's an attitude in the country that if we're not actually manufactur-ing more products, tangible products, that somehow or another, we have lost our ability to be a major power.

Is there another way for us as a society to be looking at this data that will give us a clear indication about what's going on out there?

Ms. Abraham. Let me try to answer that in a couple of different ways. You are correct that the services industry is a very diverse industry and that you do have a real mix of things there. You've got legal services, engineering and management services, some of the parts of business services that are really quite sophisticated, and are high-paying industries. You don't actually have burger-flippers there. They would be in eating and drinking places. But you've got people working for cleaning service firms and so on, who are, on average, quite low paid.

One thing that we did recently in response to a question that Congressman Ewing had raised at last month's hearing was to go back and update an analysis that we had done last summer, trying to characterize job growth with reference to whether the industries where job growth was occurring were high-paying industries versus low-paying industries.

And that's one way to take a cut at this.

That doesn't give you the whole picture because I think you need to also look at the occupational mix of employment. In very general terms, the pattern of growth that we have seen is a pattern where we have been getting relatively more growth in lower-paying industries, but with that growth concentrated in higher-paying occupations.

So the picture is somewhat mixed. I think you need to look both at the industry and the occupation dimension.

But I think there are different ways that we can cut the data up. I think you're also raising an important question about whether the classification structure that we're using is organized in the right way.

Tom Plewes has been actively involved in an effort to review the industrial classification structure. That's among the issues that I would hope that that might address.

Senator Mack. It seems that the data that we are collecting and using to analyze what's happening to the economy is data and statistical information that was designed for an industrially-based society.

There's no longer a debate as to whether we've moved into an information/communications age. The question is how do we best measure that so that we can really respond to the changes that are taking place in the economy.

We talk about industrial production. We talk about capacity utilization.

Well, if you've got 20 percent of your employment, and I guess that's roughly correct, of employment in manufacturing, if you've got 80 percent in something else, why do we focus so much of our attention on things like capacity utilization? We're now in an international market in which goods and services and capital flow very easily from across one border to another.

But we still seem to be measuring ourselves in this old economy.

Ms. Abraham. We're partly measuring ourselves that way -- we do have a lot more detailed information than we ordinarily talk about. But we may also not be talking about the information we have in the best way, and I take your point on that.

Senator Mack. Well, I would be interested in us talking more about how we might redesign and maybe capture different information.

We can do that at some other discussion rather than during one of these hearings.

But I would turn to Congressman Stark.

Representative Stark. I think the Chair is flirting with a very intriguing subject. I suppose this hasn't taken great strides yet, but as people talk about the different structure in employment patterns, there are fewer people working long periods of time with a company, and more literally becoming consultants and being leased and moving from one broker or assembler of labor or programmers to another.

It's always difficult for me to figure out whether these are employees, or whether they come under the guise of consultants.

And further down the employment food chain, it would seem to me that you'd get service workers, in the nature of maintenance or janitorial workers being independent contractors. You sort of thin that out.

Somebody said the other day, for every Federal employee we downsize, we generate a couple more employees in the beltway consultants who we're building up on the outside, and I presume paying for them as we cut down inside.

But what I'd really like to know -- and I was just going to pick at random, say, California and Florida, just to pick those states at random --

(Laughter.)

Senator Mack. Pretty random.

(Laughter.)

Representative Stark. Could you parochialize this a little bit and tell us how we did in unemployment?

Ms. Abraham. Sure.

Representative Stark. I'm about to head home and I thought I'd like to know that before one of my disgruntled constituents informs me that I don't know what I'm talking about.

(Laughter.)

Ms. Abraham. While I'm looking for those figures, which I have right here, maybe I can just comment on your opening comment.

Representative Stark. Okay.

Ms. Abraham. There is a lot that we don't know about the relationship between people and the firms that they're doing work for.

We did a supplement to the *Current Population Survey* in February that was an effort to try to learn more about that.

Representative Stark. I think the Senator has pointed out to me, he's not quite caught up to us in football yet, but they're at 5.8 percent and we're at 8.2 percent.

Senator Mack. 7.6.

Representative Stark. 7.6? How are we growing? Are we getting better or worse?

Ms. Abraham. The California rate has jumped around some in recent months. This month, the California unemployment rate was 7.6 percent. It had been 7.3 percent last month, but that change is not statistically significant.

The Florida unemployment rate this month was 4.4 percent versus 4.5 percent last month, again, about the same.

Representative Stark. This is something that has been discussed -- and I don't know whether you know this -- but it's been suggested that our most serious employment problem in terms of loss of jobs or lack of job growth, as you characterize that, has been in the construction trades.

Ms. Abraham. Has been the --

Representative Stark. The construction trades. We've done pretty well in the high-tech area -- I suppose it would be classified as other service for manufacturing -- but that California is behind the nation in the growth of construction jobs, which leads me to want to spend more of my time with the Públic Works Committee than here.

Ms. Abraham. Well, actually, looking over the year, the construction employment in California through February was up 7.1 percent.

But Tom knows more about that.

Mr. Plewes. It's hard to discern the trend in construction in California right now because construction in California in February, which is the last month we have for California, was strongly affected by --

Representative Stark. The earthquake.

Mr. Plewes. -- the construction related with the floods. There was almost a 30,000-gain of construction workers based on that.

If you go back to January and compare that, however, with a year ago, it was about flat.

Representative Stark. Yes. We do have the Disneyland of national disasters out there.

Mr. Plewes. And whether those jobs will last or not, I'm not sure, sir.

Representative Stark. That at least lets me postpone having to add to the question with any degree of certainty for another month or so.

How long have we had low or declining inflation? Where we are, three point something?

Ms. Abraham. Well, if we look back over the past several years, taking the annual rate of change in the Consumer Price Index, it was 6.1 percent in 1990 over the year, 3.1 percent in 1991, 2.9, '92, 2.7 in '93, 2.7 in '94.

Representative Stark. Almost four-and-one-half years of what people would consider low inflation?

Ms. Abraham. Stable or declining. It's up on a year-over-year basis to 2.9 percent in February '95, as compared to February '94.

Representative Stark. I really don't have any other questions to ask you, other than the ones I guess you don't, can't, or won't answer. And that is, with that long a stable inflation growth, and my concern about construction in general, I have this nagging political concern about whether the lower interest rates would be possible with that kind of a record, which would help us in the homebuilding and generally in the secondary markets in that area.

But I respect the fact that you are there to tell me what the numbers are, not why they are or what they ought to be.

But I'm happy that inflation is low. I'd be double happy if interest rates were a little lower and construction employment in California and Florida were a little higher.

It is good news, and I want to thank the messenger very much.

Thank you, Mr. Chairman.

Senator Mack. Thank you. I suspect that the fact that there are so few of our colleagues here this morning, and having concluded the work in both the House and the Senate --

Representative Stark. They've all gone to Florida or California to enjoy good weather.

Senator Mack. Well, I hope so. And on that note, we'll adjourn the meeting.

Ms. Abraham. Thank you very much.

Senator Mack. Thank you.

[Whereupon, at 9:58 a.m., the hearing was adjourned.]

SUBMISSIONS FOR THE RECORD

PREPARED STATEMENT OF SENATOR CONNIE MACK, CHAIRMAN

It is my pleasure to welcome Commissioner Abraham to the Joint Economic Committee once again this morning.

We are all pleased to note the 203,000 increase in payroll employment in March. However, the slower March employment growth reported in both the household and payroll surveys suggests that the pace of job growth may be decelerating. In addition, the unemployment rate also ticked-up one tenth of a percentage point. However, as we all know, one month of data does not a trend make. Additional information in coming months will be needed before we can draw conclusions about a possible slowdown in employment growth.

The economy continues to send mixed signals. We all applaud the upward revision in GNP growth for the last quarter of 1994. But the collapse of the dollar against the yen and the mark suggests something is wrong.

I have said before that the economy has feasted on easy money served by the Federal Reserve in 1992 and 1993. Now, on a diet of slower money growth, the economy is beginning to show the effects of the Clinton Administration's tax and regulatory burdens. It's becoming increasingly clear that Clintonomics is as sound as the dollar.

But more importantly, the standard of living of middle class Americans is slipping, as pointed out in the new JEC Republican report available on the press table. Real median family income declined \$709 in 1993 during an economic expansion.

The collapse of the dollar raises the possibility that living standards will decline even more. Even though the dollar's plight may seem far removed from the cares of American families, we need to ask how a dollar crisis and the problems it brings may affect the employment outlook.

There are still many millions of unemployed Americans who need employment opportunities. Our policies should be geared to improving their prospect for future employment growth. The best way of doing this is to quickly pass the Republican economic plan -- complete with tax cuts. Lowering the tax burden is a tried and true recipe for creating jobs.

PREPARED STATEMENT OF KATHARINE G. ABRAHAM

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to provide comments on the labor market data released this morning.

Nonfarm payroll employment rose in March, and the unemployment rate was virtually unchanged at 5.5 percent. The growth in payroll employment totaled 203,000; this was well below February's increase and also about 100,000 below the average for the prior 12 months.

The lion's share of the March increase occurred in construction and services. Construction employment rose by 58,000, as unseasonably mild temperatures prevailed over much of the nation. The number of jobs in services grew by 133,000, a gain much more in line with recent trends than February's 217,000 surge. Within this diverse industry, health services had its largest job gain in a year; amusements and recreation also had a large increase, due partly to the mild weather. Business services employment, which had risen sharply the previous month, was little changed. The personnel supply component of business services hired fewer workers than normal in March, leading to a seasonally-adjusted employment decrease of 35,000. This decline was offset by gains in other components, such as computer services, where hiring remained strong.

Employment in finance, insurance, and real estate rose by 17,000 in March, recouping most of the job losses that occurred from last August through February. All three components of this industry division contributed to the rise. Retail employment was about unchanged, following a strong gain the month before.

Manufacturing employment was flat in March. From last October through January, monthly job gains in this industry had averaged in excess of 40,000, but the pace had slowed in February. The March weakness was widespread and included declines in apparel and textiles. Only industrial machinery continued to experience strong employment growth. Both the manufacturing workweek and factory overtime declined by two-tenths of an hour in March, although they remained at very high levels.

Turning to the data from the household survey, the employment situation of most major worker groups was little changed. Among teenagers, employment grew by about a quarter of a million and the rate of unemployment declined. The overall unemployment rate has remained little changed since late last year, after having trended downward over the prior 2-1/2 years.

The number of jobseekers who had been unemployed for 27 weeks or more rose by 140,000 in March, offsetting a similar decline in February. At

1.3 million, long-term unemployment is about 450,000 below its level of a year ago. This group now comprises 19 percent of the total unemployed, twice the proportion prior to the onset of the last recession in mid-1990. The higher share today is not clearly attributable to any one factor, although some of it may stem from the larger representation of managers and professionals and of middle-aged and older persons among the unemployed. All of these groups tend to have longer-than-average job search periods.

In summary, payroll employment rose moderately in March, with the growth concentrated in the services and construction industries. Manufacturing employment was unchanged. The unemployment rate, at 5.5 percent, was about the same as in the prior month.

My colleagues and I will be happy to answer any questions you may have.

THE EMPLOYMENT SITUATION: MARCH 1995

Employment continued to increase and unemployment was essentially unchanged in March, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Nonfarm payroll employment rose by 203,000 over the month, with substantial gains in services and construction. Manufacturing employment was flat, following a 5-month period of solid growth. The unemployment rate for March was 5.5 percent.

Unemployment (Household Survey Data)

Both the level and rate of unemployment were virtually unchanged in March at 7.2 million and 5.5 percent, respectively. These measures are about the same as they were at the end of 1994; they had fallen substantially over the course of that year. (See table A-1.)

The jobless rates for adult men (4.7 percent), adult women (4.9 percent), whites (4.7 percent), blacks (9.8 percent), and Hispanics (9.1 percent) also showed little or no change in March. The rate for teenagers (16.1 percent) declined somewhat. (See tables A-1 and A-2.)

The number of persons unemployed for 27 weeks or more increased by 140,000 to 1.3 million in March. This is about the same level as in January, but substantially lower than the 1.8 million figure of a year ago. This group comprises 19 percent of the total unemployed. (See table A-5.)

Table A. Major indicators of labor market activity, seasonally adjusted

3

Total Employment and the Labor Force (Household Survey Data)

Total employment in March, at 125.3 million, was little different than in February (after seasonal adjustment). The number of employed persons has increased by 3.1 million over the past 12 months. The employment-population ratio—the proportion of the working-age population with jobs—was 63.3 percent, 1 full percentage point higher than a year earlier. (See table A-1.)

A total of 7.6 million workers (not seasonally adjusted), or 6.1 percent of all employed persons, held two or more jobs in March. A year earlier, 5.9 percent of the employed held more than one job. (See table A-8.)

At 132.5 million, seasonally adjusted, the civilian labor force was little changed in March. The labor force participation rate remained at 66.9 percent. (See table A-1.)

Persons Not in the Labor Force (Household Survey Data)

The number of persons with a marginal attachment to the labor force—those who wanted and were available for work, but were no longer actively looking for jobs after having searched sometime in the past 12 months—was 1.7 million (not seasonally adjusted) in March. Of that total, those who were not looking because they believed that there were no jobs available for them—discouraged workers—numbered 454,000, slightly lower than the year-earlier level. (See table A-8.)

Industry Payroll Employment (Establishment Survey Data)

Nonfarm payroll employment continued to expand, rising by 203,000 in March to 115.8 million. Although most of this increase was again concentrated in the services industry, there also were notable job gains in construction and in finance, insurance, and real estate. (See table B-1.)

Services industry employment rose by 133,000 in March. This followed February's unusually large increase of 217,000. A number of component industries showed strong growth in March, and there were some offsetting declines. Employment in amusements and recreation rose substantially, boosted by warmer-than-normal temperatures. Health services had its largest monthly increase in a year, including a sizable gain in hospitals, where growth had stalled over the past 2 years. In contrast, employment in the personnel supply component of business services, which had been on a steady upward course, fell by 35,000 over the month.

The construction industry added substantially more jobs than normal, resulting in a seasonally adjusted employment gain of 58,000. This reflected unusually warm weather in March. The bulk of this gain was concentrated in industries that are most sensitive to weather conditions—concrete, masonry, and roofing in special trades as well as heavy construction. The construction industry has added a total of 309,000 jobs over the past year.

Finance, insurance, and real estate employment was up by 17,000 in March, recouping most of the job losses incurred since last August. Job growth was about equally distributed among the industry's three components. Employment in insurance showed its first gain in nearly a year, while real estate's modest growth contributed to gains totaling about 100,000 since its recession-related low point 3 years ago.

Factory employment was virtually unchanged over the month after showing strong growth from October through January and a moderate gain in February. The apparel industry had the largest decline, but there also were small losses in several other manufacturing industries. Of the three industries that

4

have exhibited strong growth trends in recent months, only industrial machinery continued this pattern, whereas gains in fabricated metals and electronic equipment were much smaller in March.

Following strong gains in February, employment in both retail and wholesale trade was fairly flat in March. Retail job declines occurred in eating and drinking places and apparel stores; in contrast, auto dealers and furniture stores experienced moderate gains. Wholesale trade employment was little changed over the month, following 3 months of healthy increases.

Government employment overall was little changed over the month, but Federal employment continued on its downward trend. Federal payrolls have fallen by 165,000 since the most recent peak in April 1992.

Weekly Hours (Establishment Survey Data)

The average workweek for production or nonsupervisory workers on private nonfarm payrolls was unchanged over the month at 34.5 hours (seasonally adjusted). The manufacturing workweek declined by 0.2 hour to 41.9 hours, still a very high level. Factory overtime also declined by 0.2 hour to 4.7 hours. (See table B-2.)

The index of aggregate weekly hours of private production or nonsupervisory workers on nonfarm payrolls edged up by 0.2 percent to 131.7 (1982=100) in March. The manufacturing index fell 0.6 percent to 107.0. (See table B-5)

Hourly and Weekly Earnings (Establishment Survey Data)

Average hourly earnings of private production or nonsupervisory workers rose by 3 cents in March to \$11.33 (seasonally adjusted). Average weekly earnings edged up by 0.3 percent to \$390.89. Over the past year, average hourly earnings increased by 2.8 percent and average weekly earnings rose by 2.5 percent. (See table B-3.)

The Employment Situation for April 1995 will be released on Friday, May 5, at 8.30 A.M. (EDT).

¹ Data relate to production workers in mining and manufacturing, construction workers in construction, and nonsupervisory workers in transportation and public utilities, wholesale and retail made. *nance insurance, and real estate, and services These groups account for approximately tour-fittins of the total employees on private nonlaring payrolls.

² These senes are not published seasonally adjusted since the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision

P - preliminary

See footnote 1, table 8-2
 The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI:W) is used to deliate this

seges Change was -4 percent from January 1995 to

February 1995, the latest month available Derived by assuming that overtime hours are paid et the rate of time and one-half.

N.A. = not available.

P. = preliminary.

 $^{^{1}}$ Based on seasonally edjusted data for 1-, 3 and 6-month spans and unadjusted data for the 12-month span. Data are centered within the span. $^{\rm p}$ = preliminary.

NOTE Figures are the percent of industries with employment increasing plus one-hall of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment.
